

AI-Assisted Game Development

One-Day Workshop Agenda

Prepared for Panteon Games — Codeo · August 2026

This agenda covers all eight modules of the module catalog in a single day; in line with your feedback, Module 5 (Unity CLI and Pipeline), Module 6 (2D Art Production) and Module 7 (3D Model Production) receive the most weight. The morning sessions are run jointly with all teams; in the afternoon the engineering and art tracks run back to back with a single trainer, and anyone is welcome to sit in on the other track. Teaching is done through live demos, and reinforcement through guided lab work on a prepared sample project.

MORNING — JOINT SESSIONS (ALL TEAMS)

09:30 – 10:00	Opening: Foundations and the Art Approval Process (Module 1) — Where the four AI tool groups sit in Panteon's production line; the principle that "tools do the producing, people make the final call"; the art approval gate, copyright and store policies. The baseline metrics template is handed out.
10:00 – 10:45	Quick Tour: Modules 2 · 3 · 4 — Claude Code core practices and the Claude/Gemini task split (15 min) · JetBrains AI and enterprise management with Central (10 min) · Unity AI: Assistant and Generators live demo (20 min).
10:45 – 11:00	Break
11:00 – 12:30	Unity CLI and Pipeline (Module 5 — for everyone) — Live demo: Claude Code connects to a running editor session; the full flow from a plain-text bug report to a verified fix is followed end to end. Agent permission rules, security boundaries and the pipeline package's experimental status are discussed with the whole team.
12:30 – 13:30	Lunch

AFTERNOON — SEQUENTIAL TRACKS, ONE TRAINER (13:30 – 16:45)

13:30 – 15:00	Track A · Coin Rush: Unity CLI Game Lab (Module 5) — Engineering + DevOps — A compressed lab on a real mobile mini game. Hands-on core: CLI fundamentals and eval (Ex01), the agent-written movement script (Ex02), the BUG-201 root-cause hunt (Ex06) and your own [CliCommand] validator (Ex07). Coins, score, hazard (Ex03–05) and the iOS build (Ex09) are fast instructor demos; the magnet ticket (Ex08) is briefed as solo work for after the workshop. Anyone who falls behind catches up via the synced start scenes.
15:00 – 15:15	Break
15:15 – 16:45	Track B · 2D Art and 3D Model Production (Modules 6-7) — Art + Tech Art 15:15 – 16:00 · 2D (Module 6) — Custom models trained on the studio style in Scenario; batch production, license terms, the art approval checklist and prompt libraries — a short talk plus a compressed lab: generate » clean up » submit for approval. 16:00 – 16:45 · 3D (Module 7) — The role split between Tripo, Meshy and Rodin; the mandatory cleanup stage and mobile polygon/texture budgets — a short talk plus a compressed lab: generate » clean up » bring into Unity.

CLOSING — JOINT SESSION

16:45 – 17:30	The End-to-End Flow and Rollout (Module 8) — The outputs of both tracks are combined into a single end-to-end flow; common mistakes; the 90-day rollout plan, responsibilities and the metrics dashboard; Q&A.
---------------	---

PRE-WORKSHOP PREPARATION

Coin Rush project	The coin-rush-workshop Unity project (URP, com.unity.pipeline and the checkpoint scenes for all 9 exercises installed) is open on participant machines.
Accounts	Claude Code access for the engineers; Scenario and Meshy accounts for the art team (trial or enterprise).
Venue	One workshop room, projection, and one machine per lab participant.
